

ABSTRACT

A process for producing an electrode for an electric double layer capacitor in which an alcohol based solvent which is a forming aid agent added during preparation of an electrode forming sheet is contained in the electrode forming sheet, and the electrode forming sheet and the collector sheet are joined without removing the solvent. Furthermore, a process for producing an electrode for an electric double layer capacitor in which an alcohol based solvent is added to the electrode forming sheet just before the joining process of the electrode forming sheet and the collector sheet.
